## 7 常见故障排查 Troubleshooting of Common Faults

### 7.1 指示灯问题 Indicator lamp problem

问题: 仪表安装后不亮, 或者某一路电压指示灯不亮。

Problem: The instrument is not lit after installation, or a certain road voltage indicator light is not lit.

---

排查建议：外部开关量输入或电压输入是否正常。

Check suggestions: whether the external switch volume input or voltage input is normal

## 7.2 无线通讯故障 Wireless communication failure

问题：仪表无线通讯故障。

Problem: Instrument wireless communication failure.

排查建议：请先使用 USB 转 485 串口线与仪表 RS485 接口相连，通过通讯读取表内参数，确认表内参数与上端主站无线配置是否相同（频道与扩频因数），若不同，请修改仪表无线参数与主站一致后再重新测试；若相同，则有可能是仪表与主站相距太远或现场干扰严重，此时可尝试使用外置吸盘天线，或者考虑就近新增无线主站，再行测试。

Please connect the instrument RS485 interface with USB to 485 serial port first, read the parameters in the table through communication, confirm whether the parameters in the table are the same as the wireless configuration of the upper main station (channel and spread spectrum factor). If different, please modify the wireless parameters of the instrument to be consistent with the main station before re-testing; if the same, it may be the instrument and the main station phase. If the distance is too far or the interference is serious, we can try to use the external sucker antenna, or consider adding a new wireless main station nearby, and then test it.
